

X-to-Matter Bridge

Control any IoT device from your Matter network

Unified Interface Experience

A seamless user experience for controlling Matter and other protocol devices through a single Matter interface.

Standardized Approach

X-to-Matter Bridge is built on a standardized approach according to the Matter Bridge Specification and compatible with any Matter Controller.

Platform Flexibility

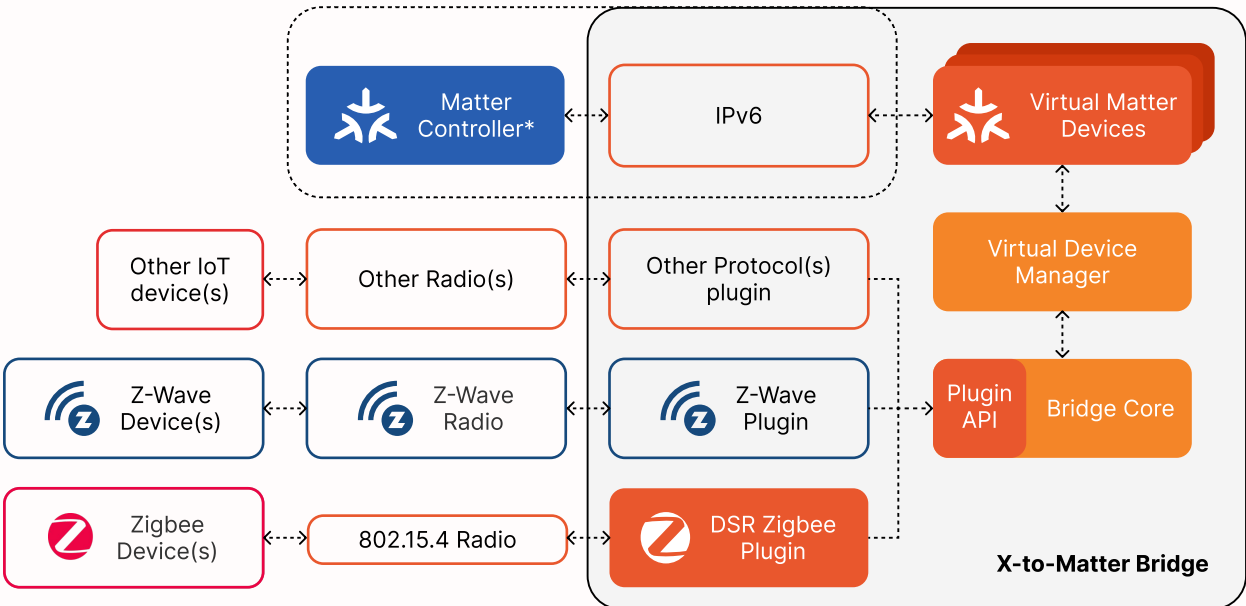

Cross-platform bridge middleware enables multi-protocol connectivity via Matter Controller API, allowing you to tailor hardware to your specific use case.

Protocol Plugins Support

DSR Plugin SDK enables integration of custom gateways and standardized or proprietary protocols with the DSR X-to-Matter Bridge.

X-to-Matter Bridge

Control any IoT protocol devices with X-to-Matter Bridge software component.

*Matter Controller running on the same or separate hardware as the bridge
